

Cemetery Mapping

An Accurate Map

Acquire an accurate map of the burials at your cemetery. Virtual Underground uses an advanced Ground Penetrating Radar array to map burials in relation to pins, plots, headstones and other landmarks. Our maps show the separation, depth, and size of each burial and can locate vaults made from all common materials (concrete, plastic, metal, stone) as well as direct burials and lawn crypts. Mapping results are presented in both printed and electronic (CAD) format suitable for merging with existing maps or as a standalone reference.

Protect Yourself

With a permanent map of the burials at your cemetery, you can protect yourself from future claims and liability. As legal and management conditions change, arm yourself with the most accurate mapping results available.

Find Unmarked Graves

We can identify the locations of vaults and burials when records have been lost. Discover the boundaries of historic cemeteries. Evidence of burial excavation can be mapped after many years or even decades have passed.

Other Underground Features

In addition to burial sites, we can provide the location of utility lines, foundations and geological features on your property. These can be mapped simultaneously with burials and presented on their own or in combination with the burial plots.

Advantages

Permanent Map

Non-Invasive

Minimal Disturbance / Noise

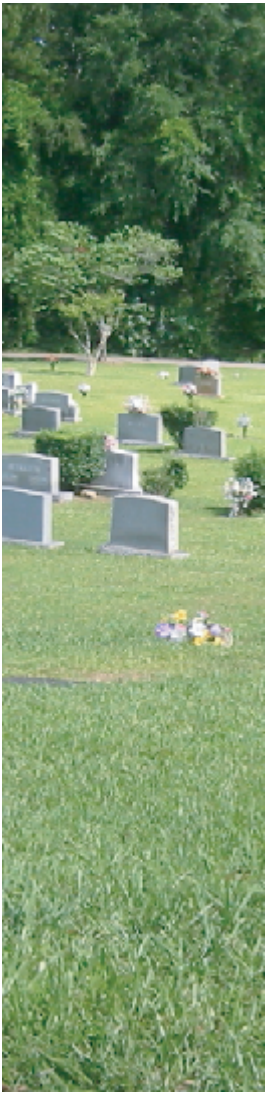

Cost Effective

Accurate

Sees Direct Burials

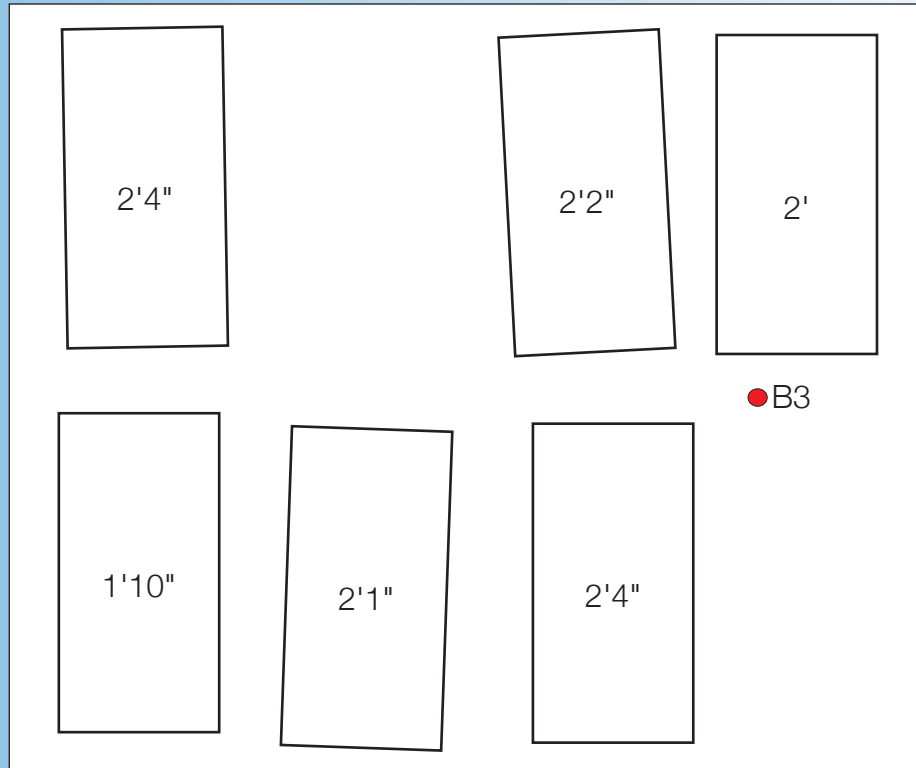

Sees All Types of Vaults:
Metal, Plastic, Concrete

Sample Map

In the sample map section pictured below the burials can be seen in relation to a surface pin location. Each burial has an individual depth and outline.

Flexible Collection

Our technology allows us to survey several areas over a period of time and integrate them into a single map. If you need an immediate answer about a single section (or even an individual plot) in your cemetery we can provide it. Later, a more comprehensive picture of your facility can be created by combining these individual surveys into a single map and merging them with any existing records that are available.
